

Simon 1: Hello, would you like to start this interview with a mini apology?

Simon 2: Yes, you know my nuclear war songs monologue?

Simon 1: I do...

Simon 2: I did point out that 'Whoops I did it Again' by Abba wasn't really a song about such wars and that I was joking, but when I counted the amount of war songs I listed in my article out of curiosity, I included the Abba track anyway, causing confusion for those reading. People would be like '... How did that song get on the radio?'

Simon 1: Google says actually that song was by Britney Spears...

Simon 2: Really? I thought it was Abba...

Simon 1: Nope. Not only that, the song is 'Oops, I did it Again.' If you want to be more precise, it's 'Oops!... I did it, Again.' Note the three dots AND the exclamation mark.

Simon 2: So that's four things I have to apologise for...

Simon 1: Four or five. Not a mini apology now, is it?

Simon 2: I'm so sorry...

Simon 1: I hate to say this, but really I think you should get to work on a more extensive Apology 59 right now.

Simon 2: I'm so sorry.

Simon 1: Why?

Simon 2: I can't be bothered.

Simon 1: Ok. Change the subject, then?

Simon 2: Yes please.

Simon 1: Have you Googled anything interesting, recently?

Simon 2: Yes, I asked A.I. what viruses taste of, and I was told salt. Therefore, you can technically season foods with Covid-19.

Simon 1: Wow. Talk about a health risk...

Simon 2: I know, right? Why not just use regular salt?

Simon 1: I can see the headlines now: 'Weird new salt puts world on standstill.'

Simon 2: Yeah, I mean some people don't like Gordon Ramsey because he's rude, but killing millions and millions of people because he wanted to try a new recipe that tastes like an already exciting one, anyway? That's Stalin level.

Simon 1: It's very serious, isn't it? There must never be Covid chips, etc...

Simon 2: Right, especially as you can't even run out of salt, anyway. It's like discovering a new drink that tastes exactly like water but it has a 50/50 chance of killing you. I mean... what's the point?

Simon 1: Google what would happen if you seasoned food with Covid 19...

Simon 2: Wow, you'd likely experience no health problems, at all...

Simon 1: Still though, that's nothing to get EXCITED about, is it?

Simon 2: I know, right? Oh, the internet goes on to say if you inhaled the virus whilst seasoning, THAT could make you ill. I'd leave working with such an ingredient...

Simon 1: Google if you can season food with the virus?

Simon 2: No, you can't...

Simon 1: You can't season food with Covid, yet the internet says what would happen if you do?

Simon 2: Right, it makes you wonder how the internet knows what would happen...

Simon 1: It's very intelligent, I suppose...

Simon 2: Yes, but if I were to say 'I've invented a new food that's technically impossible but I know what it tastes of, anyway' would I come across as intelligent or pretentious?

Simon 1: Pretentious?

Simon 2: Exactly. If I called myself 'intelligent' after such a claim, it would only make things worse.

Simon 1: And what else has been on your mind?

Simon 2: Hypersleds!

Simon 1: And what are they?

Simon 2: Sleds that can travel on special tracks at around 6,800 mph!

Simon 1: What's the point?

Simon 2: That's what I was thinking. I mean if they can only travel on unique rails,

they're not going to be able to transport too many people, are they? Hopefully people will start racing them.

Simon 1: What, like a drag race?

Simon 2: Yep, you could have two tracks with two sleds on them side by side and after the man says 'go!' the race is over in ten seconds.

Simon 1: And how long would track have to be at that speed?

Simon 2: 18.89 miles...

Simon 1: Ah.

Simon 2: Yeah, not very practical.

Simon 1: That is assuming the sleds can accelerate to that speed instantly, though. If not, the race would go on for that little bit longer.

Simon 2: Still though, a 20 second event probably wouldn't get too many people excited. I guessing the track would have to repaired after every race. If not, a supersonic sled would fly into the crowds and kill everyone.

Simon 1: Wow, you have to travel to Area 51 or wherever the sleds are, you watch them for 20 seconds and then you die. How about you watch Formula 1, instead?

Simon 2: Oh, there are lots of things you can do in 20 seconds that are better than dying.

Simon 1: Or spectacularly dying...

Simon 2: Yeah, and I wouldn't want to spectacularly die anyway, it would be embarrassing. Cancer is more dignified and certainly easier to react to.

Simon 1: Would you like to talk about food, again?

Simon 2: Yes, one Youtuber once said he used to eat sugar cubes out of the box 'like a psychopath'. Is that a well known trait of a psychopath?

Simon 1: Google?

Simon 2: It's not.

Simon 1: -_-

Simon 2: Right, it's the kind of thing a child would do. Calling all children psychopaths would lead to a whole new level of nihilism. Eating Covid on the other hand, kinda sounds psychopathic to me. I could see Ted Bundy eating Covid as his last meal just to freak people out. As in 'You're about to execute me? Well, watch this!... Mmm, yum yum yum.' It's creepy.

Simon 1: Also, if I heard someone said they eat sugar cubes, I'd actually perceive him as more gentle than most people...

Simon 2: Right. Maybe he means the way he eats is psychopathic.

Simon 1: What do you mean?

Simon 2: He could chew with his mouth open...

Simon 1: I'd say that's more rude than evil...

Simon 2: It does deviate from societal norms...

Simon 1: Yes, but so do children when they misbehave...

Simon 2: I should give children a break?

Simon 1: Right, stop calling them psychos.

Simon 2: What should I call them?

Simon 1: 'Adorable' is fine.

Simon 2: Oh, I know how you can eat like a psychopath...

Simon 1: Go on.

Simon 2: You could eat sugar cubes with your mouth open whilst chewing on a blood capsule. Maybe at someone's funeral?

Simon 1: Did the Youtuber do that?

Simon 2: I hope not... Even eating sugar cubes out of the box in a funeral would be disrespectful.

Simon 1: And is that all you have to say?

Simon 2: Yes, bye!
