

Simon: Hello, what are your thoughts on KFC's secret recipe?

Simon: I think they should stop going on about it.

Simon: Why?

Simon: I mean fine, their breadcrumb recipe IS nice, but that's not a trait that's unique to the company is it?

Simon: I guess not...

Simon: I mean should the company really guard their businesses with machine gun-armed soldiers or whatever it is they do? Even if the ingredients were released to the public it would make next to no difference as 99% of the population wouldn't bother making it for themselves. Other companies on the other hand would have no use for the recipe as they have their own!

Simon: I suppose I have had other fried chicken that is just as good, if not better...

Simon: Right, yet you don't hear those companies going mental about their ingredients. I've always liked cucumber, ham and pickled onion sandwiches which I think is my own recipe. How would you react if I said 'tell someone else about my sandwich and I'll kill you'?

Simon: Well, I don't think KFC are THREATENING people...

Simon: I said that because it's really me that's threatening people, isn't it? Projection, as they say.

Simon: That was very wise.

Simon: Cucumber, ham and pickled onion sandwiches are good, though...

Simon: If you really think so strongly about your own sandwiches, maybe that's a sign you should share them with the rest of the world.

Simon: Oh, ok...

Simon: Actually, you've shared them already...

Simon: I have, haven't I? Just a few seconds ago...

Simon: Are you sure you invented it?

Simon: I think so...

Simon: It's just that A.I. is giving the recipe for the food, suggesting it's already a real thing...

Simon: A.I. is listing the ingredients of my cucumber, ham and pickled onion

sandwich?

Simon: Yep.

Simon: What's it say?

Simon: You can probably guess, but it also says you need butter or mayonnaise...

Simon: That's not true! I don't use any of those ingredients!

Simon: It's also suggesting you use salt or black pepper...

Simon: Wow, that was really pushy...

Simon: When did you 'invent' the sandwich?

Simon: As a 4 or 5 year old. Way before AI...

Simon: Did you see the recipe on a cooking show at the same age?

Simon: And what cooking show would that be? 'The how to make exceptionally basic foods show'?

Simon: It does sound dull.

Simon: There you go, then. Speaking of chicken, I was in a chicken shop the other day and I saw a sign I could kinda read, but I was looking at it through a mirror, so it was back to front. Consequently, I thought it told people what to do if they have a foot allergy. Of course it really said FOOD allergy. I was wondering what that meant.

Simon: Can people be allergic to their own foot?

Simon: It's a question for Google, isn't it?

Simon: What does it say?

Simon: It says it's not possible...

Simon: Wow, I thought you could be allergic to pretty much everything...

Simon: You can't even be allergic to other people's feet!

Simon: The world has gone mad. Is there a recipe you ARE curious about?

Simon: Yes, what in God's name is in Coca Cola? It doesn't taste of anything at all, just itself. Same goes for Red Bull.

Simon: Two drinks you can't have any more...

Simon: Yes, I can only have foods and drinks that aren't enigmas. Which is why I can

eat KFC.

Simon: Are you sad you can't have those drinks anymore?

Simon: I am indeed. I used to luv em.

Simon: And if you ever ate a Hawaiian pizza that didn't taste of pineapple and ham, but chicken and pepperoni, that would drive you mad, too?

Simon: Right. Because it would be an enigma.

Simon: That does make sense, you know? Your brain can't make sense of the food and that drives you crazy.

Simon: The simplest explanation is usually the real one.

Simon: Haggis and ice cream is a real flavour apparently, would that drive you mad?

Simon: Probably. But would that be because it's enigmatic or disgusting? It's hard to say...

Simon: No you can find out, you eat haggis on its own. If that drives you crazy, it's because of the flavour.

Simon: You could say the fact people eat haggis in the first place is an enigma...

Simon: Fair point. I've heard bad things about it.

Simon: Me too. Is it various animal organs stuffed inside a cow's stomach or something like that?

Simon: I think so. It doesn't sound appetising, but at very least the ingredients aren't an enigma.

Simon: Is this interview offensive to Scottish people?

Simon: I don't think so, if anything they should be respected. I mean eating food that bad? It takes courage.

Simon: Oh yeah.

Simon: It's depressing for the chefs, though.

Simon: :(

Simon: What are your thoughts on Scottish armies and Roman armies?

Simon: Well as you said, Scottish people have courage because they eat haggis and Scotland defeated the ancient Romans. As you can't defeat an army without courage, you could make an argument that haggis defeated the Romans...

Simon: EXACTLY my thoughts. Well done.

Simon: The history books need to be rewritten, don't they?

Simon: Yes, it would give a more accurate view of the world and it would be entertaining at the same time, there are no losses.

Simon: That's history lessons spiced up then, now we need to work out how to make other school subjects fun...

Simon: Any ideas?

Simon: I'm not sure how making haggis in food tech is interesting if everyone hates the food...

Simon: Yes you're right, haggis saving countries is better than eating haggis.

Simon: I'm also not sure how haggis can improve physical education, design technology or I.T...

Simon: Google says traditional haggis is bad for you because it's high in fat and salt so it actually makes P.E. worse...

Simon: And how does it affect D.T. and I.T.?

Simon: It's time for the internet...

Simon: And?...

Simon: 'The traditional Scottish dish haggis has no direct effect on information technology' which is what I expected, but haggis does fit in with the topics of food production, processing and packaging, making it an ideal D.T. subject!

Simon: Terrible news for cows, though...

Simon: Which is why you never hear of the animals studying history or D.T...

Simon: Wow, you've just solved an age old problem!

Simon: :D

Simon: End on a high?

Simon: Yes, bye!
