

Simon: Hello! Anything amazing on your mind?

Simon: Yes, definitely!

Simon: :O

Simon: I bought some noodles, and without water added to them, they were say 50 calories, but when you add water to them alone, that makes them about 200 calories!

Simon: That's magic...

Simon: I know! Either that, or water can make you fat which can't be right.

Simon: And energy can't come out of nothing...

Simon: Hmm... What about the big bang?

Simon: I really don't know. I think THAT came out of nothing, actually. I wonder if the noodles and the big bang have anything in common...

Simon: Cosmic noodles.

Simon: Fascinating, but I'd feel uncomfortable eating them. What if you explode?

Simon: Yes, but what if when you do so, you're the God of a new universe?

Simon: By eating noodles?

Simon: No one knows how the universe started. That COULD have happened all those billions of years ago...

Simon: Are you interested in writing a scientific essay on your theory?

Simon: I'm not really sure what to write. I have the main theme, but other than that, I'm pretty stumped...

Simon: Do you know what $E=MC^2$ means?

Simon: Energy = Matter times speed squared?

Simon: That's right! You can understand an equation made by a genius. That makes YOU a genius.

Simon: Yeah!

Simon: Now get writing.

Simon: Er....

Simon: I believe in you.

Simon: I have to be honest, I don't understand WHY energy = matter times speed squared.

Simon: Doesn't matter.

Simon: Really? Why?

Simon: You're an ideas person. You don't need to worry about the details...

Simon: It seems to me like the details are pretty big.

Simon: No, no, no, it's easy. Cosmic noodles = New Universe. Or rather $C = U$. I've started you off, now finish.

Simon: $C = U$! That's brilliant! In a few years time, everyone will say it!

Simon: :)

Simon: Ok, so... $U \times 2 = R4 + D$.

Simon: What's it mean?

Simon: I'm not sure. The letters and numbers just came to me. You know how tunes sometimes just came to Paul McCartney? It's like that.

Simon: Wow...

Simon: Check this out: $ED2 + RX3 = Z$

Simon: Very nice. I like how you've used unusual letters.

Simon: Yes! 'J' isn't used too much either. So we get $J98 = Q3$

Simon: THAT'S good.

Simon: Do you think I should send my maths ideas to the noodle companies? Maybe they'd give me a life's supply or whatever.

Simon: Either that or put a picture of you on their products. Do you have any other skills I should know about?

Simon: I can stand pens up straight, flick them, and make them do backflips.

Simon: Really that's two skills...

Simon: Ikr. I'm actually more proud of that than the equations and stuff.

Simon: Lol.

Simon: You don't think... Maybe they didn't make any sense?

Simon: No, no, no... In maths letters get combined with numbers, it's weird.

Simon: If you're sure...

Simon: I know so, now let's move on. Who's the most important person you've powned?

Simon: My primary school teacher.

Simon: :O What happened?

Simon: When I was 10, my teacher accused me of not listening to her French lesson, (to be fair I wasn't), so she made me recite the foreign 12 months of the year to the class. I did.

Simon: Awesome.

Simon: I could have pointed out that I powned her, but that wouldn't have gone down well at all. Luckily I didn't know the word at the time as it wasn't invented.

Simon: Exactly. You can't go around saying you've been powning teachers. Do you know what the Amazon logo means?

Simon: Yep. The arrow underneath the company name goes from a to z, doesn't it? As in 'Amazon - everything from a to z.'

Simon: Yes!

Simon: However, the Prime Video logo doesn't make any sense. The arrow goes from i to d. 'Everything from i to d'??

Simon: Maybe they're just not very good...

Simon: No, I think they do sell films beginning with e onwards...

Simon: Hm. Do you have any ideas on how to improve the logo?

Simon: It could be improved if the i went to the o, but it still wouldn't be as good as the normal Amazon logo.

Simon: Think!

Simon: Errr... Maybe if the company changed the name to 'Prima Videoz', then the a could go to the z. ('Prima' is Italian for 'first', as in 'First Videoz'. Kinda the same as Prime Video).

Simon: My God, you've done it again.

Simon: Thanks.

Simon: What would YOUR logo be?

Simon: Zimon Wiedemann, everything from z to a.

Simon: Z to a isn't quite as catchy as a to z for some reason, though... And Zimon isn't your name.

Simon: Close enough.

Simon: No, I don't think so, it's just confusing. People will think you're called Zimon, which is a real name. A surname, but still. And you're not selling anything so again, it doesn't make sense...

Simon: Forget the arrow, how about this?... S: imon Wiedemann.

Simon: I like that! It could suggest there's something wrong with you, though...

Simon: Or what about Sim :O n Wiedemann?

Simon: That's better. Makes you seem impressive.

Simon: Last one: Simon Wie d: emann...

Simon: Bye.
