

Today, I'll be reviewing '15' by Buckcherry! Annoyingly it wasn't released on my 15th birthday, but two years later. Dammit. It would just be a nice coincidence, that's all. Their album 'Time Bomb' was released when I was 12, would I want that album to be dedicated to me? No. Even if the band were friendly to me and said something like 'I think you're cool, we made an album just for you that we called 'time bomb' :)', I'd still be troubled if not more so. The fact such people worked at 'Mad Dog Studios' would only scare me more. And the record label the band were on? It was called 'Universal Japan'. Would I be a part of some terrorist group that believed the country to be the greatest nation on Earth and was planning a new world war? In that case it would be the most stressful period of my whole life and there would be no medications to cure me. Antidepressants may help at very least but them making a real difference? I guess no? And why were the band on three labels at the time, the others being 'Eleven Seven' and 'Atlantic'? You know what all these numbers remind me of? All those youngsters saying 'Six seveeeeen!' like it's the greatest thing ever.

Again, it's not a palindrome BUT if you rearrange the record label name, you CAN get such a number it, that being '171'. Awesome! Not perfect though, you can't get a palindrome when mixing 15 and 117, I tried REALLY hard. What a start to the year. It would be amazing if it was the start to 2025 though, as what number do you get when adding the 1, 5, 1, 1 and 7 together? Epic... No wait that doesn't add up to 25... This does though, '15, 1, 1, 7' there you go. Some may say that's twisting things but to that I say 'live a little'. Oh yes, and how does Atlantic relate to the album or band? Are bucks in oceans? If so, who put them there and why? I'm just saying it's not their habitat, so it suggests disordered thinking. Also, there are no cherries in the ocean as cherries float. Ok, you can hypothetically see cherries ON the ocean but again, who put them there? Even weirder, who put bucks AND cherries there? If it was a terrorist group, you get the impression they don't really have any goals and if they do, they don't really make any kind of sense.

Interestingly, this album sold pretty well in Japan. Again, Japanese people don't have any wacky views, do they? I mean right? If so, I'm wondering how big their army is and what's exactly it's trained for. Ok, there are a lot of apologies I need to make here. Sorry to Buckcherry for even suggesting they'd think it's cool to send me a pipe bomb and for saying they'd look up to me for using it. Sorry for accusing Universal Japan of thinking it's better than everyone else. Japan MAY have the best sauce (wasabi sauce), but the country being the best at everything? No. And even if they were, they shouldn't boast about that. Say if someone graduated Harvard and was given the award of 'best student'. If such a person started a company called 'Greatest Person in the World' wouldn't you find him to be irritating? And of course sorry to Japan on the whole for calling them warlike. If it makes the country feel any better, my dad let me try his wasabi chicken he bought from I think Sainsbury's, and I genuinely thought it was very near to restaurant quality. :)

What do I think of the album? It's ok, I guess. Maybe a bit too cheerful which is strange if you took my prior theories too seriously. Sorry is a powerful word. I hope. If not, actually I AM in trouble. The music is kinda like Guns 'n' Roses, and Aerosmith, just not as good. And if anyone is to send me a weapon whilst wishing me well, it has to be Guns 'n' Roses, right? But to be clear, not even they would do that. Whilst I may not be TOO keen on the album, other people must be if the band had a good three labels. Also, the fact they had so many people working with them suggests

nothing shady was going on, as it would be too hard to organise. It's like when I had schizophrenia and thought I ruled the world. Of COURSE I didn't otherwise at some point, SOMEONE would have said something like 'I disagree with Simon Wiedemann's policies' for example, just the one time. It doesn't make sense and may sound unbelievable, but faulty brain chemistry is a dangerous thing. Drink one cup of coffee and that is actually what I'll start believing again. Now let's move on and give the album a fairly good 8.5/10. Bye!
