

The other day I got a notification from AdSense (the company that deals with the ads on my site) telling me I had to do something by February, but I don't know what as the writing was so confusing. Thankfully there is support for people who need help with whatever I need to do. Yes I do want support, again I can't for the life of me work out what they're trying to say. I'm very much reminded of the basically gibberish writing in the book *Finnegan's Wake*. If I read the four or so paragraphs of the terms and conditions from the company (at least I think they're terms and conditions) over and over again for a couple of hours, maybe I'd understand them then (which is coincidentally how *Finnegan's Wake* is supposed to be read) but I have better things to do with my time so I'm going to leave it to the last minute and pray AdSense gives in to me and does things for me, which I think has happened before. On the plus side though, the confusing writings did inspire this monologue. Here are some T&C I've written myself also in the style of FW. Here goes...

Hello, valued customer. Please do something for the adverts on your site. But to spice things up, let's go on a literary adventure! Or as the French would say an 'aventure litteraire'. The Germans on the other hand would say 'literarisches abenteuer' and Italians would say 'avventura letteraria', I'm wondering if that's where Ace Ventura got his name... Not let's combine all the languages together: aventurelitteraireliterarischesabenteueravventuraletteraria. If that wasn't extreme enough for you, how about just making words up? Gjpojopkopkopkopkopkopkopkopkopkopkd. Confused much? Or should I say 'molto confuso'? How's this for confusing, simplify this: $(64 \times 9y^2) - \frac{1}{3}$, I've just put algebra in whatever it is this writing is about! Try and solve it for maximum points, if you can't we're here to support you! Now let's make the English language confusing by eliminating all punctuation heres a true story about my shoes the other day I left the house wearing odd shoes but no one noticed as I was as cool as a cucumber but I was only as cool as a cucumber because I didnt realise I was wearing odd shoes until I got home

You know what's really confusing? Rocket science, which is why I will be sharing a RS equation here: $\Delta v = v_e \ln \frac{m_0}{m_f}$. Good isn't it? I for one know I'll never build rockets in the same way after reading that! Here's a quantum physics equation: $H(t) | \psi(t) \rangle = i \hbar \frac{d}{dt} | \psi(t) \rangle$ Wow, I've never look at time the same way, again! Oh wow, the internet says quantum doesn't refer to time as I first thought. I guess I didn't understand that equation, then. Whoops! I'm still leaving it here though, you work it out. Now here is a chemical symbol: $A + P + 24 + Aq$. If you don't know what that means, get a degree in chemistry and try reading these terms and conditions again. If it turns out NOT to be a chemical symbol on the other hand, I am so sorry for wasting your time. However, if you're being philosophical you won't have wasted three years studying as all knowledge is valuable, I think. Anyway, if you're still reading this article, well done! Please [t6i4c9k3t7h7i5s444boxifyouve5r3understo5odtheterms3and5conditions44.7735635553](#). However, to tick the box, you must tap it five times a second for ten minutes, then tap it seven times a second for five minutes. If you don't you will be losing revenue from your adverts. And that's all you have to do! Bye! :D

If you're like me, you'll be thinking 'oh screw these people' after reading something like that. Even if the article made use of the relatively simple 7 times table something fishy would be going on. As in 'what's 7 x 9? You have ten seconds to answer.'

What's the point??? It's interesting I say that, as the seven times table is infinitely easier than the nonsense Adsense sent me, forget quantum physics that's a piece of cake. I feel like a naughty school child. The teacher would be like 'Please do your homework, the deadline is coming up very soon' and I'd just say 'No.' It's not because I'm lazy it's because my homework would just end up making me look worse. In a way it's better if I pretend to know how to do something but don't bother, rather than me looking like I'm hardworking and obedient and then saying $7 \times 6 = 4$. I once saw an angry parent say to his failing son 'spell 'philosophy'' and the child wrote something like 'fizjhhfe', he should have just said 'No.' It's like criminals saying 'No comment' when being interrogated, sometimes it's for the best. And I'm not saying it's ok to commit crimes so don't expect apology 41 just yet, I'm just saying speak English! Bye!
